

# MazikCare DataFusion Module

Bridges clinical and business insights into a unified data platform to save you time and resources

## THE SOLUTION

MazikCare DataFusion connects data from EMRs and other clinical systems into the [Microsoft Power Platform](#). By unifying information into a single portal, it helps providers and staff save time and take necessary actions faster.

**Unified Data Model** – Built on Microsoft’s Healthcare Common Data Service, this fully HIPAA-compliant solution enables healthcare customers to synchronize both clinical and financial data with Dynamics 365 and the Microsoft Power Platform. That means no more switching between platforms or tedious cross-referencing to get work done.

**Pre-built Integrations** – Leveraging HL7 integrations and FHIR standards, MazikCare DataFusion makes clinical data far more actionable from Day 1. Our proven MEDIC integration connector helps healthcare organizations like yours reduce EMR integration efforts while lowering the cost of integration point management.

**Azure Machine Learning** – The power of machine learning applied to clinical, behavioral, and business data helps you identify trends and predict patterns in patient populations so you can put solutions into effect earlier.

**AI Services** – Improve patient activation, medication adherence, risk identification – and reduce readmission rates – through guided AI implementation. Our integrated platform helps healthcare businesses meet their greatest potential.
